

Research Participants Needed

The purpose of the study is to assess the quality of life of Arab American children and adolescents with intellectual disabilities (ID) compared to their non-Arab peers with ID. This will give insight on the social determinants of health unique to the Arab American population, allowing us to understand the needs of the Arab American population with intellectual disabilities.

Qualifications :

Scan the QR code or type the link below to take the survey:

- ✓ Parent or caregiver of a child that is:
- ✓ Enrolled in any school program, including homeschooling
- ✓ Age 5-17
